

Science Camp: Advanced Electric RC (Grades 8 – 12)

If you have already completed *Building Electric Race Cars*, or if you are up for a challenge, then this is the class for you! Choose between a high-speed T-REX helicopter and an all-terrain HoverDart hovercraft.

- The HoverDart is a fast, integrated RC hovercraft designed for racing on water, land and ice, indoors or out. On water, the craft climbs very quickly over hump speed from a standing start to a high speed cruising. On land, it will speed away in straight line or closed course racing. T-REX heli is great for 3D flight and wind resistance; the main frames are made of high strength fiberglass and light aluminum alloy material, suitable for 3D acrobatics and beginners.
- In this class, students will get a taste for the real world of transmitters, receivers, and the gears, circuitry, and motors of RC electronics.

Monday – Friday, 10:00am – 12:00pm
Session I: July 14 – July 25
Session II: August 11 – August 22
Cost per session: \$300 plus materials
